

## CYCRA COMPOSITE PROBEND HANDGUARDS

**THE PRODUCT:** Cycra's Composite Plastic Probend Handguards give the off-road ATV rider protection for the handlebar levers, hands and thumb throttle from saplings, brush, roost and wind at a lower price than aluminum handguards.

**MATERIAL:** High-impact polypropylene composite, billet 6061 aluminum mounting clamps, bar-ends and mounting hardware.

**CONSTRUCTION:** Full wrap-around handguards have a patented drop-design for more ease of movement, plus the ends of the guards have integrated, replaceable, all-plastic abrasion guards. Two pairs of bar-end inserts allow fitment to OEM steel or aluminum handlebars. Comes in black, natural, white, blue, orange, green, red and yellow.

**MANUFACTURER'S CLAIMS:** "These handguards are effective at protecting from weather, roost, debris and small branches; however, they may not prevent injury."

**PERFORMANCE:** It takes a few minutes to cut the grip ends off, line everything up (U-clamps are marked "L" and "R") and tighten the mounting points. Once they're on, the Composite Probend Handguards are unobtrusive, due to the drop-ends,

during rider movement. They do a good job of keeping the winter windblast or heavy roost off of your hands, and small branches, nosee'um vines and saplings are deflected to the side.

**CONSIDER THIS:** Cycra Racing also has a Composite Probend ATV Racer Pack for the same price that has a linked U-clamp set which provides proper fitment and extra clearance for cables on sport and utility ATVs with tall handlebars. There are racer packs for standard or oversized (1-1/8) bars, so make sure you snag the right package.

**THE VERDICT:** We like the Composite Probends over aluminum because ATVs don't take the big hits from trees that motorcycles do, and the plastic guards provide more give yet still protect from roost, vines, branches, wind and weather. They're

also about \$40 less and lighter. The replaceable abrasion panels are also a good idea, as they keep the ATV looking newer. The downside with the Composite Handguards is that you can't change to Cycra's new Stealth DX, Low-Profile or Enduro handshields like you can with the \$109.95 Probend I aluminum handguards.

**MANUFACTURED IN:** USA

**RATING** ★★★★★

**PRICE:** \$69.95
